Connecting to the eduroam wireless network using Windows 8.1

Open Control Panel and select the View network status and task link under the Network and Internet category.

Select Set up a new connection or network
Select “Manually connect to a wireless network.”

Type in the following information:

- Network name: eduroam (it’s important you type this in lower case only)
- Security type: WPA2-Enterprise
- Encryption type: AES
- Select the check mark next to Start this connection automatically.

Click Next.
Select **Change connection settings**.

Select the **Security** tab.

- **Security type**: WPA2-Enterprise
- **Encryption type**: AES

Choose a network authentication method:
- **Microsoft: Protected EAP (PEAP)**
- **Settings**

- **Remember my credentials for this connection each time I'm logged on**
Choose a network authentication method: **Protected EAP (PEAP)** and click the **Settings** button.

On the Protected EAP Properties window:

- Un-check "**Verify the server’s identity by validating the certificate**"
Select "Configure" next to the "Select Authentication Method" and ensure "Automatically use my Windows logon name and password (and domain if any)" is unchecked.
